

Autocross

The Parade driving event will be an autocross. It will be an all forward motion, autocross with a rolling start and finish. Automobiles will be timed while driving a course laid-out on a paved area. Safety of the entrants, workers and spectators will be of paramount importance in the design and conduct of the event.

A-1. Referenced Rules

The rules referenced below apply to the autocross.

- (a) Eligibility. (See G-2.1. through G-2.6.)
- (b) Protests. See G-9.
- (c) Awards. See G-11.1. and G-11.3.
- (d) Entrants must complete on-site Parade check-in before the event or they will not be allowed to compete. Entrant classification or classification changes must occur no later than the day before the event starts. (See G-2.4.1.)

A-2. Classification

Entrants are responsible for properly classifying their automobiles. Refer to G-5.2. "Mis-classification", G-3.2. "Questions", and G-9.5.3.(b) "Automatic Disqualifications".

A-2.1. Categories

There are four categories of classes – Showroom Stock, Production, Improved, and Modified. Categories are related to automobile configuration.

The Showroom Stock (S) Category contains classes of automobiles as normally delivered and specified for use in the United States and Canada. Factory options as normally available for a specific model year are permitted. Certain factory and/or dealer installed equipment/options will move an automobile out of S and into Production or higher as specified in the Modifications Allowed List (Appendix V) table so as to maintain the intent and integrity of the Showroom Stock classes.

The Production (P) category contains automobiles as normally delivered and specified for use in the United States and Canada, plus automobiles with limited performance affecting changes from stock.

The Improved (I) category contains automobiles with more substantial performance-affecting changes from standard (stock) specification, whether changed by the factory, dealer or owner. These modifications have defined limits. These automobiles are classed according to their number of cylinders and actual displacement.

The Modified (M) category contains automobiles that have performance-affecting modifications outside of the limits of the Improved category and race automobiles (factory-built or otherwise). These automobiles are classed according to their specified number of cylinders and actual displacement.

A-2.2. Classes

Each category is divided into classes, grouping automobiles with similar performance potential. Each class is divided into an Open group (both men and women can participate) and a separate Women's groups for scoring purposes. Classes prefixed with "S" are for Showroom Stock, those with "P" are Production Classes, those with "I" are Improved Classes and those with "M" are Modified Classes. "Open" and "Women's" classes are designated with a suffix "O" or "W" respectively as appropriate for each class as designated in the Class Chart below (example: S01O, P08W or M04O).

The numerical assignments of the classes do not necessarily indicate relative performance potential between classes. Factory and non-factory race cars are considered modified and are classed by the number of cylinders and actual displacement.

These classes are presented in the Class Chart. For the purpose of automobile classification, factory options as normally delivered for a specific automobile and/or model year are permitted.

This includes R-rated, less than 180 treadwear, tires even if they were on the automobile as delivered. However, those dealer and factory options that are not considered to improve performance are allowed in the Showroom Stock and Production classes (i.e., trim packages, air-conditioning, etc.).

Showroom Stock automobiles, delivered from the factory with tread wear of less than 180, may run in their respective Production Category classes. These automobiles must run the N-spec tires specified by Porsche for that year and model and have no additional alterations or modifications. Showroom Stock or Production classes are also the starting point in the determination of final classification of the automobiles that have been changed from stock. Production based "racing" automobiles will be classed according to their initial car type and the modifications they have as specified in these rules.

If an automobile is not a United States-specification automobile, the entrant must be able to prove that the automobile is equivalent to the respective Production automobile (as delivered to the United States public through authorized sales outlets of the manufacturer) to qualify for Production classification or equivalent to the respective Improved automobile to qualify for Improved classification; otherwise the automobile will be classified in the Modified category. DOT and/or EPA Certification alone do not make an automobile equivalent to a U.S. specification automobile for the purposes of the PCRs.

Class Chart

A-2.2.1 Showroom Stock and Production

The following table lists all autocross classes grouped and sorted by class. Following this table is another (A-2.2.2) grouped by car type to make it easier to find your car in order to classify it. The recommended classing for different size regions is now maintained by the PCA National Autocross Committee and is no longer in the PCRs. Please check the PCA website at www.pca.org/autocross/ for this information.
